DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over either one of Okino et al. or Masui et al.

After a complete review of the entire written record the Examiner finds that the scope of protection sought is rendered prima facie obvious in view of Okino et al. or Masui et al. A careful review of the documents in their entirety shows uniform pattern formation on substrates utilizing electron beam exposure sources. See specifically Masui et al., Abstract and the claims. See specifically Okino et al., column 2, lines 17-22, column 4, lines 61-64, and the claims. A skilled artisan in possession of these prior art documents would have found the instant invention prima facie obvious. A 35 USC 102 rejection is not being issued since specifics for the teachings are not definitively stating the claims of the instant application, however, one of skill when viewing these references, particularly the noted passages, would have found the electron beam mask as claimed obvious, with the beneficial purpose of equalizing pattern density on the substrate.

Response to Arguments

3. Applicant's arguments, filed 8-4-03 with the certified translation of the priority document, with respect to the rejection(s) of claim(s) 1-9 under 35 USC 102 and 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Okino et al. and Masui et al. as set forth above.
